

Paras Khanchandani

Full Stack Developer

DOB: 15/09/1996

I have experience on vanilla HTML, CSS, Javascript. I've made quite some few projects on my own (Thanks to lockdown as I had all the time in the world). There's a Jailbreak tweak called Xen HTML for iOS devices, that allows you to make your own custom homescreens just with these web technologies, it is almost like a Website running on the Homescreen. Because of that I believe I've earned enough experience to make fully interactive UI and UX Widgets where people can not only get a beautiful User Interface out of it, but an awesome experience. I think, this experience alone might boost up in the development process in making beautiful front end websites to your company. Also combined with the asynchronous technologies like ExpressJS NodeJS and ReactJS, the sky is just the limit.

Work History

2021-03 - 2021-05 **Electron Developer**
Nitroless, Jaipur, Rajasthan
Responsible for making an Electron App for the Nitroless project <https://nitroless.github.io/> as a fully functioning Windows App

Accomplishments

- **Accent Cards**

Accent Cards OPW (packix.com) is an OPW Xen HTML Widget. OPW stands for One Page Widget, which is an all in one Widget that gives you a Setup completely Ready out of the box for your beautiful Homescreen. OPWs already provides a Dock, and set of App shortcuts that you can easily place your own. Accent Cards also provide a set of Tiles stored in each Card. These tiles can be easily modified by enabling Edit Mode through the settings.

- **Lumia for iOS**

Lumia (packix.com) is A Xen HTML One Page Widget (OPW), i.e. we provide a ready made Homescreen setup that you're require to get it working with no effort at all! Lumia OPW, will provide a full MetroUI Setup similar to those all old Windows Phones, specially Nokia Lumia Phones we all were a fan of. It provides a similar Windows Phone experience of what you can ask from a Windows Phone! With the ability to add custom made Tile Setups in the Start Screen, and an App List that helps you pin apps to the Start menu, similar to how Windows Phones worked. What's awesome about it, it just runs like it should just with Xen HTML.

- **Influential HS**

Influential HS (packix.com) is A Xen HTML OPW(One Page Widget), to apply on your Homescreens to replace your stock iOS Homescreens completely. This widget uses Microsoft's Fluent Design Language, completely using all the guidelines and the vision of Windows 10. It has a beautiful Acrylic Blur effect with a bit Noise effect on its background.

- **Nitroless Electron Windows App**

Nitroless/Electron: An Electron app for Nitroless for Windows (github.com) brings Nitroless App for Windows OS, with all the functionalities like addition of repositories, copying and pasting of the emotes, search of emotes, etc.
